

System Architecture & Technical Documentation - Deagensie Platform

1. Executive Summary & Vision

Deagensie is a next-generation AI-driven brand engineering ecosystem, predictive marketing intelligence platform, and **Talent-as-a-Service (TaaS)** bridge built to connect African creative talent with global enterprises, scale-ups, and ambitious founders.

The platform serves two primary audiences:

Ventures & Businesses: Accelerating growth through AI-powered market positioning, investor-ready brand engineering, and on-demand creative squads.

2. African Creatives: Providing global career opportunities, competitive income, and career acceleration while keeping talent rooted in their local communities.

2. Technology Stack & Framework Ecosystem

Component	Technology	Version / Specification	Role & Usage
Core Framework	Nuxt 4	^4.4.6`	Full-stack Vue SSR/SSG engine, server routing, auto-imports

UI Library	Vue 3	<code>^3.5.34`</code>	Progressive Composition API (`<script setup  lang="ts">`)
Router	Vue Router	<code>^5.0.7`</code>	File-based routing and transition management
Styling Engine	Tailwind CSS v4	<code>^4.3.0`</code>	Inline design tokens (`@theme inline`), utility classes, dark variant
UI Primitives	Reka UI & Shadcn Nuxt	<code>^2.9.7` / ^2.7.3`</code>	Accessible accordions, dialogs, sheets, comboboxes
Iconography	Iconify Vue	<code>@iconify/vue ^5.0.1`</code>	Vector icon sets (HugeIcons, Carbon, Fluent, Mingcute, Solar, etc.)
Animations	Custom Reveal Engine & Embla	<code>embla-carousel-vue ^8.6.0`</code>	Scroll-reveal directives (`v-reveal`), smooth carousels, marquee

Form Validation	VeeValidate & Zod	<code>^4.15.1` / `^4.4.3`</code>	Reactive form state validation, type-safe schemas
Utilities	VueUse	<code>^14.3.0`</code>	Media queries, DOM state hooks, element boundary detection

3. Design System & Typography Standard

3.1 Typography Architecture

Deagensie enforces a strict two-tier typography hierarchy across all screen sizes:

- **Primary Brand Font** — ``Prata`` (`--font-prata`, CSS class `.font-prata`):

- **Typeface:** Google Font 'Prata' (Serif).

- **Usage:** Primary page headlines ([h1](#)), section titles ([h2](#)), card titles ([h3](#), [h4](#)), stat callout numbers ([.stat-value](#)), and high-impact editorial statements.

- **Design Purpose:** Imparts a sophisticated, high-end, editorial aesthetic inspired by luxury publication design.

- **Secondary Body Font** — ``Open Sans`` (`--font-open-sans`, CSS class `.font-open-sans`):

- **Typeface:** Google Font 'Open Sans' (Sans-Serif).

- **Usage:** Global body copy ([p](#)), subheadings, list items ([li](#)), uppercase section badges ([span](#)), navigation menus, form fields, and UI buttons. Applied globally to [body](#).

- **Design Purpose:** Ensures maximal legibility, crisp rendering, and high accessibility across mobile, tablet, and desktop viewports.

3.2 Color System & Utility Classes

- **Primary Navy:** [#04308F](#) (used for primary brand containers, callout backgrounds, dark headers).
- **Accent Cyan:** [#05DED5](#) (used for primary interactive buttons, highlight badges, and focus rings).
- **Secondary Teal:** [#026662](#) (used for deep AI feature cards and dark section surfaces).
- **Surface Grays:** [#FCFCFE](#), [#F8FEFE](#), [#F6F6F6](#) (used for card containers and subtle section separation).
- **Fluid Font Scaling:** `font-size: clamp(0.9375rem, 0.875rem + 0.3125vw, 1.0625rem);` for responsive typography across all screen breakpoints.

4. Architectural Structure Breakdown

6. Development, Linting & Build Workflow

- **Development Server:** `pnpm dev` (runs Nuxt 4 development environment).
- **Build Target:** `pnpm build` (compiles production bundle using Nitro engine).
- **Code Quality:** `pnpm validate` (runs Prettier formatting check and ESLint).
- **Git Hooks:** Lefthook automatically executes pre-commit formatting and linting rules prior to commits.
